

Template 2: Requirement list (Functional Requirement, Quality Requirements, Constraints) and Use Case

Template 2.1 Requirement List

Requirement ID	Requirement Description	Requirement Type	Requirement Source Traceability
FR-01	The system shall allow candidates to submit an application including personal details, resume (CV), academic information, skills and internship learning goals.	Functional	Company 1 HR Interview and Arvato Interview submission requests.
FR-02	The system shall allow candidates to upload additional materials including video introductions, presentation slides, and portfolio links.	Functional	Arvato Interview candidate requirement for rich media materials and GitHub portfolios.
FR-03	The system shall provide a unified submission interface where all submitted candidate materials are submitted in a single workflow.	Functional	Arvato Interview platform tracking challenge across scattered channels.
FR-04	The system shall allow employers to define open-ended questions that candidates must answer during application submission.	Functional	Company 1 HR Interview open-ended questions protocol.
FR-05	The system shall store and manage candidate data including skills, academic information, portfolio links, achievements, project experience and responses.	Functional	Combined HR interview candidate profile requirements.

FR-06	The system shall allow HR to view a complete candidate profile containing all submitted materials in one interface.	Functional	Arvato Interview request for centralized student profile review tracking.
FR-07	The system shall allow HR to filter candidates based on skills, academic qualifications like CGPA, project experience, achievements and responses to questions.	Functional	Arvato Interview filter pane demand due to high application volumes.
FR-08	The system shall allow HR to compare multiple candidates based on selected attributes.	Functional	Candidate evaluation and workflow screening procedures.
FR-09	The system shall allow HR to assign and update candidate application statuses including Applied, Shortlisted, Screening, Interview, Offered, Rejected and KIV.	Functional	Multi-stage status workflows derived from employer interviews.
FR-10	The system shall allow candidates to track their application status.	Functional	Derived from application tracking workflows and transparency requirements.
FR-11	The system shall allow HR to record evaluation notes and assessments for each candidate.	Functional	Arvato Interview evaluation criteria for student communication.
FR-12	The system shall allow HR to shortlist candidates and forward selected candidates to hiring managers.	Functional	Recruitment routing workflows from HR screening to hiring manager.

FR-13	The system shall provide interview scheduling functionality including time slot creation and candidate selection of available slots.	Functional	Company 1 HR Interview scheduling tool recommendations.
FR-14	The system shall support integration with external calendar systems for interview scheduling.	Functional	Calendar synchronization tracking requested during employer interviews.
FR-15	The system shall allow employers to create, edit, view and reuse internship job postings.	Functional	Company 1 HR Interview request to access and copy old postings.
FR-16	The system shall provide shareable application links for distribution via external platforms like LinkedIn or JobStreet.	Functional	Arvato Interview internship promotion methods on social channels.
FR-17	The system shall support direct application submission through the platform.	Functional	Platform entry point requirements for direct applicants.
FR-18	The system may rank candidates based on skills match, academic performance, project relevance, portfolio quality and achievements.	Functional	Optional automated ranking functions for high volume applications.
FR-19	The system may highlight recommended candidates separately from general applicants.	Functional	Screening enhancement tools to separate top student matches.
FR-20	The system may support structured or timed video responses for candidate screening.	Functional	Candidate authenticity and spoken evaluation mechanisms.

FR-21	The system may provide configurable screening questions for preliminary assessment.	Functional	Derived from open-ended assessment protocols across HR interviews.
FR-22	The system may support posting and application for Final Year Project industry collaboration opportunities.	Functional	Arvato Interview backing for combined internship and research projects.
FR-23	The system shall allow new users to register accounts based on their assigned roles.	Functional	Multi-role entry pathways across candidates, administrators, and hosts.
FR-24	The system shall allow registered users to log in using valid credentials.	Functional	Secure authorization checkpoints for platform profiles.
FR-25	The system shall allow authenticated users to securely log out from the system.	Functional	Secure session destruction and log out workflow models.
FR-26	The system shall allow users to reset forgotten passwords securely.	Functional	Account maintenance capabilities for profile restoration.
FR-27	The system shall allow users to update their personal account information.	Functional	User details editing loop linked to profile bookmarks and settings.
FR-28	The system shall allow students to view all submitted applications in a dashboard.	Functional	Student dashboard request for structural review of milestones.

FR-29	The system shall allow students to withdraw or edit applications before deadline.	Functional	Student submission editing capability to fix application mistakes.
FR-30	The system shall allow students to rate and review internship experiences.	Functional	Feedback loop tracking overall internship milestone achievement.
FR-31	The system shall allow students to log internship progress.	Functional	Direct entry method tracking logbooks and goal achievements.
FR-32	The system shall support collaboration between universities and industry partners for micro-internship opportunities.	Functional	Faculty interview statement on bridging university and corporate fields.
FR-33	The system shall allow lecturers to monitor student internship progress through uploaded reports and logs.	Functional	Interface tracking features for supervisors to observe logbooks.
FR-34	The system shall allow lecturers to review student project planning and task progress.	Functional	Supervisory monitoring workflow covering placement timelines.
FR-35	The system shall provide custom fields for companies to highlight requested student specializations like Software Engineering or AI.	Functional	Specialized filter requests from companies seeking specific cohorts.
FR-36	The system shall provide a Verification Checklist for coordinators covering items like Insurance, Visa, Pay Model, and Computer Science relevance.	Functional	Administrative screening matrix ensuring proper program alignment.

FR-37	The system shall support a Liaison Flag for non-translatable company websites to notify specific language-proficient lecturers for review.	Functional	Automated trigger alerts for international platform screening.
FR-38	The system shall be able to generate comprehensive statistical reports detailing total students placed, participating industries, total company acceptances, total company rejections, and company scale categorizations.	Functional	Mandatory institutional reporting analytics requested by coordinators.
FR-39	The system shall include a job description module that exposes detailed job scope fields so students understand expectations before applying.	Functional	Transparent workspace scopes outlining coding parameters prior to entry.
FR-40	The system shall include a digital workflow for students to upload offer letters for coordinator verification.	Functional	Formal verification workflow mapping company letters to university databases.
FR-41	The system shall provide university lecturers visibility to monitor weekly logbook submissions and plan company visits.	Functional	Field management utilities linking log submissions to site scheduling.
FR-42	The system must deliver an administrative dashboard for career center staff to monitor all internship postings and track student participation.	Functional	Survey data highlighting centralized control over system entries.
FR-43	The system should enable career centres to approve or reject internship listings before they are published.	Functional	Administrative filter gatekeeping to review items for guidelines.

FR-44	The system should allow career centres to generate reports on internship outcomes for academic or accreditation purposes.	Functional	Institutional data generation matching academic requirements.
FR-45	The system should provide an administrative dashboard for tracking student participation in internships.	Functional	Visual tracking framework logging placement success distributions.
FR-46	The system should provide analytics on student engagement like applications, matches, and placements.	Functional	Real time numerical chart compilation tracing application actions.
FR-47	The system should allow career centres to build and manage relationships with industry partners and employers.	Functional	Communication module managing profiles of corporate partners.
FR-48	The system should enable career centres to verify the credibility of employers and internship postings.	Functional	Validation workflow ensuring the legitimacy of external postings.
FR-49	The system should allow career centres to coordinate internship programs directly with employers.	Functional	Joint portal workspace for tracking agreements and slots.
FR-50	The system should provide a platform for employers to collaborate with career centres on internship requirements and expectations.	Functional	Collaborative workspace updating core stakeholder requirements.
FR-51	The system should allow career centres to receive feedback from employers on student performance after internships to improve future matching and preparation.	Functional	Program assessment loops checking host supervisor reviews.

FR-52	The system shall provide AI-generated analytics and summaries from supervisor feedback forms.	Functional	AI-driven content analysis processing corporate supervisor feedback sheets.
FR-53	The system must incorporate a secure in-app messaging and scheduling workspace that acts as the exclusive channel for stakeholder communications.	Functional	Survey feedback requesting built-in tools to stop external texting.
NFR-01	The system shall be able to display clear, specialized job scope and task fields to applicants prior to their submission.	Non-Functional (Usability)	Verification rules ensuring applicants understand jobs before submission.
NFR-02	The system shall be able to provide university lecturers a monitoring interface to track student weekly progress and plan upcoming site visits.	Non-Functional (Usability)	Usability rule governing student milestone observation views.
NFR-03	The system shall provide a mobile-responsive interface for easy access across devices.	Non-Functional (Usability)	Usability target for cross-device viewport scaling.
NFR-04	The system shall provide high system usability for lecturers managing multiple students simultaneously.	Non-Functional (Usability)	Usability parameter ensuring layout supports concurrent item tracking.
NFR-05	The portal must be fully optimized for mobile devices as the primary browsing method.	Non-Functional (Usability)	Usability guideline emphasizing smartphone-first layout tuning.
NFR-06	The portal shall ensure secure handling of uploaded resumes and personal information and accessibility above speed.	Non-Functional (Security)	Security standard prioritizing information safety over process speed.

NFR-07	The system shall minimize application friction by eliminating redirection to external websites for form completion.	Non-Functional (Usability)	Usability rule preventing external redirects during apply workflows.
NFR-08	The system shall ensure fast loading speeds for listings to accommodate users with limited time.	Non-Functional (Performance)	Performance guideline prioritizing fast rendering of listing rows.
NFR-09	The system shall provide accurate and relevant internship recommendations to reduce irrelevant listings.	Non-Functional (Quality / Usability)	Quality metric matching jobs to accurate student profiles across dashboards.
NFR-10	The system shall display the student application dashboard within 2 seconds under normal conditions.	Non-Functional (Performance)	Speed ceiling for layout rendering during normal platform loads.
NFR-11	The system shall ensure that updates to applications are processed in real-time without data loss.	Non-Functional (Reliability)	System tracking requirement targeting instant data preservation.
NFR-12	The system shall ensure that all submitted reviews are accurate, moderated, and securely stored.	Non-Functional (Security)	Content integrity and security requirements for community postings.
NFR-13	The system shall support efficient report viewing and submission tracking to reduce administrative workload.	Non-Functional (Performance)	Operational performance metric streamlining page lookups.
NFR-14	The system shall be able to successfully complete 100% of multi-megabyte digital logbook file uploads without dropping data packets or timing out.	Non-Functional (Robustness)	Error tolerance threshold governing multi-megabyte attachment uploads.

NFR-15	The system shall support scalable management of large numbers of students and companies.	Non-Functional (Scalability)	Load target accommodating variable increases in enterprise node connections.
NFR-16	The system shall operate as a fully centralized ecosystem that consolidates all stakeholder workflows into a single unified platform.	Non-Functional (Usability)	Center requirement targeting the removal of fragmented platforms.
NFR-17	The system must reduce manual administrative overhead by automating post-application tracking and eliminating external dependencies.	Non-Functional (Usability)	Optimization rule preventing switching to external email loops.
NFR-18	The system shall allow new users to complete key tasks within 5 minutes without external assistance.	Non-Functional (Usability)	Simple usability onboarding index across HR and student roles.
NFR-19	The system shall achieve at least 80% task success rate for first-time users during usability testing.	Non-Functional (Usability)	Minimum validation standard evaluating interface friction.
NFR-20	The system shall maintain consistent UI design across all pages.	Non-Functional (Usability)	Uniform design specification across multi-role layouts.
NFR-21	The system shall respond to user actions within 2 seconds for 95% of requests under normal load.	Non-Functional (Performance)	Latency ceiling covering general background calculations.
NFR-22	The system shall support up to 500 concurrent users with no more than 3 seconds response time degradation.	Non-Functional (Performance)	Performance scale benchmark tracking multi-tenant peak usage.

NFR-23	The system shall support at least 10,000 applications per recruitment cycle without performance degradation beyond defined thresholds.	Non-Functional (Scalability)	Volumetric scalability baseline handling bulk transaction lines.
NFR-24	The system shall enforce authentication for all HR users and role-based access control (RBAC).	Non-Functional (Security)	Identity protection controls managing data views.
NFR-25	The system shall log all access to candidate data for audit purposes.	Non-Functional (Security)	System audit trail tracking profile read and write actions.
NFR-26	The system shall ensure no data loss during submission, with transaction success rate higher than or equal to 99.9%.	Non-Functional (Reliability)	Transaction stability metric protecting document lines.
NFR-27	The system shall validate all required fields before submission to prevent incomplete or inconsistent data.	Non-Functional (Data Integrity)	Field completion security rule guarding against corrupt strings.
NFR-28	The system shall achieve at least 99% uptime excluding scheduled maintenance.	Non-Functional (Reliability)	Availability metric ensuring round the clock access boundaries.
NFR-29	The system shall correctly update application status with 100% consistency across all views including HR and candidate dashboards.	Non-Functional (Reliability)	View parity constraint tracking status fields securely.
NFR-30	The system shall allow HR to override or ignore any automated recommendation or ranking.	Non-Functional (Operational)	Discretion rule preserving final human vetting privileges.
NFR-31	The system shall synchronize interview schedules with	Non-Functional (Performance)	Real time threshold limits mapping tool connectivity.

	external calendar systems within 1 minute of any update.		
NFR-32	The system shall ensure synchronization accuracy of at least 99% between the system and external calendar platforms.	Non-Functional (Reliability)	Integration accuracy standard preventing entry drops.
NFR-33	The system shall support generation of shareable application links compatible with external job platforms.	Non-Functional (Integration)	Interoperability specification covering external promotional tools.
NFR-34	The system shall follow modular architecture where core components can be updated independently without affecting other modules.	Non-Functional (Maintainability)	Structural decoupling principle isolating framework layers.
NFR-35	The system shall include documentation for all modules to support future development and maintenance.	Non-Functional (Maintainability)	Technical codebase documentation completeness standards.
NFR-36	The system shall encrypt sensitive data in transit using HTTPS and at rest using AES-256 or equivalent.	Non-Functional (Security)	Cryptographic transmission guidelines protecting student files.
NFR-37	The system shall enforce secure session handling and authentication control.	Non-Functional (Security)	Session validation checkpoint blocking hijacking vulnerabilities.
NFR-38	The system shall enforce authentication and identity verification mechanisms during password reset.	Non-Functional (Security)	Intercept verification measures stopping unauthorized profile recovery.
NFR-39	The system shall protect sensitive user information from unauthorized access.	Non-Functional (Security)	Confidentiality policy shielding student records.

NFR-40	The system shall be able to maintain continuous system availability with zero server downtime errors reported during peak logbook submission windows.	Non-Functional (Reliability)	System stability rule protecting high volume drop environments.
C-01	Students may avoid applications that require long proposal writing because anything more than that feels too time-consuming.	Constraints	User behavioral constraint dictating submission completion speed expectations.
C-02	Students mainly access the platform using mobile phones because they mostly browse on their phone.	Constraints	Hardware baseline constraints dictating standard layout scaling profiles.
C-03	Students prefer fast and simple application processes looking for a quick apply that takes 5 to 10 minutes.	Constraints	Workflow layout restrictions ensuring rapid data input models.
C-04	Students may lose motivation when employers do not respond to applications or ghost them.	Constraints	Communication workflow friction tracking application progression pacing.
C-05	Lecturers supervise multiple students at the same time, limiting detailed monitoring to about 5 to 7 students per supervisor.	Constraints	Operational workload allocation bounds dictating coordinator supervision layouts.
C-06	Lecturers cannot manually verify every company or student placement individually because they cannot check them one by one.	Constraints	Administrative process overhead restrictions demanding automated workflows.

C-07	Lecturers face difficulty analyzing large amounts of student and industry feedback manually if they have to look one by one.	Constraints	Data tracking constraints requiring systematic processing utilities.
C-08	The micro-internship portal cannot serve as the final academic system of record as final student placement approval and official module registration WIA3001 must proceed exclusively through the university core external system Maya.	Constraints	Core legacy backend boundaries preventing direct course enrollment overrides.
C-09	International Student Restrictions: The portal must restrict international student profiles from applying to unverified voluntary micro-internships to protect them from breaking national immigration laws and breaching visa regulations.	Constraints	High-priority legal and security logic restrictions dictating account validation paths.
C-10	Students cannot fully utilize placement profile updates until their university matric card number is active in the master administrative system.	Constraints	System sync dependency blocking complete operational platform setups.
C-11	The supervisor assignment logic must cap allocation to respect lecturer workload fairness and annual KPI limits so every lecturer has a different workload balance.	Constraints	Operational routing constraints managing employee resource distribution charts.

C-12	The allocation system must restrict supervisor routing so that a single lecturer is dispatched to a corporate location postcode node regardless of student specialization variance, mitigating travel inefficiencies.	Constraints	Location based structural optimization constraints restricting supervisor travel fields.
C-13	The system must filter out or flag job descriptions that contain or exploit cheap labor on a commission-only base or non-Computer Science tasks like pure marketing.	Constraints	Platform quality controls preventing illegitimate external data posts.
C-14	The system framework shall comply with organizational security policies and standards.	Constraints	Institutional and corporate data standard governance rules.
C-15	The system architecture shall support horizontal scaling to handle increased load.	Constraints	Infrastructure scalability blueprint handling macro transaction expansions.
C-16	The system shall allow new features to be added with minimal changes to existing code which is less than or equal to 20% modification of existing modules.	Constraints	Extensibility constraints regulating long-term maintainability.
C-17	The system shall include a digital workflow for students to upload offer letters for coordinator verification once Maya registration opens for the internship module.	Constraints	Chronological process constraints tracking external dependency timelines.

C-18	Employers cannot directly approve academic modules as approval is through Maya and the coordinator will approve through Maya instead of the Career Portal.	Constraints	Platform authority boundaries dividing external roles from system modules.
C-19	The layout should allow one supervisor to look over about 5 to 7 students smoothly.	Constraints	Functional visual constraints tracking workload display lines.
C-20	The system shall allow new features to be added with minimal changes to existing code which is less than or equal to 20% modification of existing modules.	Constraints	Development codebase update rules limiting modification side-effects.

Template 2.2: Use Case

A set of possible interactions between external actors and a system that provides a benefit for the actor(s) involved. Note: Use cases are specified from a user's (or other external actor's) perspective: each use case describes the functionality the system must provide to the actors involved (definition from International Requirement Engineering Board).

Use Case ID	Use Case	Associated Requirement List
UC-01	Register Account	FR-23: The system shall allow new users to register accounts based on their assigned roles. NFR-03: The system shall provide a mobile-responsive interface for easy access across devices. NFR-18: The system shall allow new users to complete key tasks within 5 minutes without external assistance. NFR-24: The system shall enforce authentication for all HR users and role-based access control (RBAC).

		NFR-27: The system shall validate all required fields before submission to prevent incomplete or inconsistent data. NFR-36: The system shall encrypt sensitive data in transit using HTTPS and at rest using AES-256 or equivalent. C-14: The system framework shall comply with organizational security policies and standards.
UC-02	Login into System	FR-24: The system shall allow registered users to log in using valid credentials. NFR-03: The system shall provide a mobile-responsive interface for easy access across devices. NFR-21: The system shall respond to user actions within 2 seconds for 95% of requests under normal load. NFR-24: The system shall enforce authentication for all HR users and role-based access control (RBAC). NFR-36: The system shall encrypt sensitive data in transit using HTTPS and at rest using AES-256 or equivalent. C-10: Students cannot fully utilize placement profile updates until their university matric card number is active. C-14: The system framework shall comply with organizational security policies and standards.
UC-03	Logout from System	FR-25: The system shall allow authenticated users to securely log out from the system. NFR-37: The system shall enforce secure session handling and authentication control.

		C-14: The system framework shall comply with organizational security policies and standards.
UC-04	Reset Password	FR-26: The system shall allow users to reset forgotten passwords securely. NFR-36: The system shall encrypt sensitive data in transit using HTTPS and at rest using AES-256 or equivalent. NFR-38: The system shall enforce authentication and identity verification mechanisms during password reset. C-14: The system framework shall comply with organizational security policies and standards.
UC-05	Manage Personal Information	FR-27: The system shall allow users to update their personal account information. NFR-27: The system shall validate all required fields before submission to prevent incomplete or inconsistent data. NFR-39: The system shall protect sensitive user information from unauthorized access. C-10: Students cannot fully utilize placement profile updates until their university matric card number is active. C-14: The system framework shall comply with organizational security policies and standards.
UC-06	Submit Internship Application	FR-01: The system shall allow candidates to submit an application including personal details, resume, and goals. FR-03: The system shall provide a unified submission interface where materials are submitted in a single workflow. FR-17: The system shall support direct application submission through the platform.

		FR-29: The system shall allow students to withdraw or edit applications before deadline. NFR-07: The system shall minimize application friction by eliminating redirection to external websites. NFR-11: The system shall ensure that updates to applications are processed in real-time without data loss. NFR-26: The system shall ensure no data loss during submission, with transaction success rate $\geq 99.9\%$. C-01: Students may avoid applications that require long proposal writing. C-03: Students prefer fast and simple application processes taking 5 to 10 minutes.
UC-07	Upload Candidate Materials	FR-02: The system shall allow candidates to upload materials including video intros, slides, and portfolio links. FR-05: The system shall store and manage candidate data including skills, portfolios, and project experience. NFR-06: The system shall ensure secure handling of uploaded resumes and personal information. NFR-14: The system shall successfully complete 100% of multi-megabyte digital logbook file uploads.
UC-08	Answer Screening Questions	FR-04: The system shall allow employers to define open-ended questions that candidates must answer. FR-21: The system may provide configurable screening questions for preliminary assessment. NFR-27: The system shall validate all required fields before submission.

UC-09	View Candidate Profile	FR-06: The system shall allow HR to view a complete candidate profile containing all submitted materials. NFR-24: The system shall enforce authentication for all HR users and role-based access control (RBAC). NFR-25: The system shall log all access to candidate data for audit purposes.
UC-10	Filter and Rank Candidates	FR-07: The system shall allow HR to filter candidates based on skills, CGPA, and project experience. FR-18: The system filters and ranks candidates based on academic performance, skills, and criteria. FR-19: The system may highlight recommended candidates separately from general applicants. NFR-09: The system shall provide accurate and relevant internship recommendations. NFR-21: The system shall respond to user actions within 2 seconds for 95% of requests.
UC-11	Compare Candidates	FR-08: The system shall allow HR to compare multiple candidates based on selected attributes. FR-18: The system allows users to compare selected candidates based on academic performance, skills, and criteria. NFR-21: The system shall respond to user actions within 2 seconds.
UC-12	Update Application Status	FR-09: The system shall allow HR to assign and update candidate application statuses (Applied, Offered, etc.). NFR-29: The system shall update application status with 100% consistency across all views.

UC-13	Track Application Status	FR-10: The system shall allow candidates to track their application status. FR-28: The system shall allow students to view all submitted applications in a dashboard. NFR-10: The system shall display the student application dashboard within 2 seconds. NFR-29: The system shall correctly update application status with 100% consistency.
UC-14	Record Candidate Evaluation	FR-11: The system shall allow HR to record evaluation notes and assessments for each candidate. NFR-25: The system shall log all access to candidate data for audit purposes.
UC-15	Shortlist and Forward Candidates	FR-12: The system shall allow HR to shortlist and forward selected candidates to hiring managers. NFR-15: The system shall allow HR to override or ignore any automated recommendation or ranking.
UC-16	Schedule and Sync Interviews	FR-13: The system shall provide interview scheduling including time slot creation and selection. FR-14: The system shall support integration with external calendar systems for interview scheduling. NFR-31: The system shall synchronize interview schedules with external calendars within 1 minute. NFR-32: The system shall ensure synchronization accuracy of at least 99%.
UC-17	Manage Internship Postings	FR-15: The system shall allow employers to create, edit, view and reuse internship job postings. FR-35: The system shall provide custom fields for companies to highlight specializations. FR-39: The system shall include a job description module that exposes detailed job scope fields.

		FR-43: Career centres shall approve or reject internship listings before they are published. FR-48: Career centres shall be enabled to verify the credibility of employers and postings. C-13: The system must flag job descriptions that exploit cheap labor or non-CS tasks.
UC-18	Share Application Links	FR-16: The system shall provide shareable application links for external distribution. NFR-33: The system shall support generation of shareable links compatible with external job platforms.
UC-19	Conduct Video Screening	FR-20: The system may support structured or timed video responses for candidate screening. NFR-11: The system shall ensure updates to applications are processed in real-time.
UC-20	Manage FYP Opportunities	FR-22: The system may support posting and application for Final Year Project industry collaborations. C-16: The system shall allow new features to be added with minimal changes to existing code ($\leq 20\%$).
UC-21	Monitor Internship Progress	FR-30: The system shall allow students to rate and review internship experiences. FR-31: The system shall allow students to log internship progress. FR-33: The system shall allow lecturers to monitor progress through uploaded reports and logs. FR-34: The system shall allow lecturers to review student project planning and task progress.

		FR-41: The system shall provide lecturers visibility to monitor weekly logbook submissions. FR-45: The system should provide an administrative dashboard for tracking student participation. NFR-02: Provide university lecturers a monitoring interface to track student weekly progress. NFR-04: Provide high usability for lecturers managing multiple students simultaneously. C-19: The layout should allow one supervisor to look over about 5 to 7 students smoothly.
UC-22	Plan and Verify Site Visits	FR-41: University lecturers plan company visits via visibility of logbook submissions. C-12: Restrict supervisor routing so that a single lecturer is dispatched to a corporate postcode node.
UC-23	Generate Statistical Reports	FR-40: The system must deliver an administrative dashboard for career center staff to monitor all internship postings and track student participation. FR-38: Generate statistical reports detailing total students placed, participating industries, and acceptances. FR-44: Allow career centres to generate reports for academic or accreditation purposes. FR-46: Provide analytics on student engagement like applications, matches, and placements. NFR-13: Support efficient report viewing to reduce administrative workload.
UC-24	Coordinate Collaborative Workspace	FR-32: Support collaboration between universities and industry partners for micro-internships. FR-47: Allow career centres to build and manage relationships with industry partners.

		FR-49: Allow career centres to coordinate internship programs directly with employers. FR-50: Provide a platform for employers to collaborate with career centres on requirements. NFR-16: Operate as a fully centralized ecosystem that consolidates all stakeholder workflows.
UC-25	Verify Placement Compliance	FR-36: Provide a Verification Checklist covering Insurance, Visa, Pay Model, and CS relevance. FR-37: Support a Liaison Flag for non-translatable company websites to notify lecturers for review. FR-40: Include a digital workflow for students to upload offer letters for coordinator verification. C-06: Automated workflows to avoid manual company verification. C-08: Final student placement approval must proceed exclusively through the external system Maya. C-09: Restrict international student profiles from applying to unverified voluntary micro-internships. C-17: Workflow for offer letters for coordinator verification once Maya registration opens.
UC-26	Organize Supervisor Allocations	C-11: The supervisor assignment logic must cap allocation to respect lecturer workload fairness. C-12: Restrict supervisor routing so a single lecturer is dispatched to a corporate location postcode node.
UC-27	Analyze Feedback via AI	FR-51: Allow career centres to receive feedback from employers on student performance. FR-52: Provide AI-generated analytics and summaries from supervisor feedback forms.

		C-07: Address difficulty of analyzing large amounts of student and industry feedback manually.
UC-28	Use In-App Messaging	FR-53: Incorporate a secure in-app messaging and scheduling workspace as the exclusive channel. NFR-17: Reduce manual overhead by automating tracking and eliminating external dependencies.

Use Case Diagram
